Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	<i>PROVINCIA DI TRENTO-TRATTAMENTO ACQUE</i>
Project Number:	<i>2010 0529</i>
Country:	<i>Italy</i>
Project Description:	<i>Wastewater treatment plant in the Province of Trento</i>

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

The project concerns the construction of a new wastewater treatment plant in the municipality of Calliano, serving Trento and surrounding municipalities, in the Region Trentino Alto Adige, located in Northern Italy. The plant, with an initial capacity of 150,000 inhabitants-equivalent, has replaced the existing Trento Sud plant of a slightly lower capacity which had become obsolete and was located in an increasingly urban context. It also treats the wastewater of some additional, adjacent municipalities currently with lower technology treatment plants. The new plant, has been built to be able to accommodate a successive capacity expansion to 300,000 inhabitants-equivalent capacity in view of the subsequent closure of also the Trento North waste water treatment plant.

The operation has allowed to treat wastewater following the stricter norms of the Urban Waste Water Treatment Directive 91/271/EC as amended by 98/15/EC for sensitive areas. In particular, the river Adige and the Adriatic Sea will see an improvement in the “ecological and chemical status”, as required also by the river basin management plan implementing the requirements of the Water Framework Directive (2000/60EC).

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
