Environmental and Social Data Sheet

Overview

Project Name:	SAVANA (EGFF)
Project Number:	20210261
Country:	Spain
Project Description:	Development of a new technology providing pharma companies access to utilise the clinical information embedded within Electronic Health Records (EHR)
EIA required:	no
Project included in Carbon Footprint Exercise:	no

Environmental and Social Assessment

Environmental Assessment

The project concerns investments in research and development activities carried out by the Promoter and its partners in existing facilities without changing their already authorised scope. The research and development activities of the project do not fall under either Annex I or Annex II of the EIA Directive 2011/92/EU amended by Directive 2014/52/EU.

The project has been assessed for Paris alignment and is considered to be aligned both against low carbon and resilience goals against the policies set out in the Climate Bank Roadmap and/or associated guidance and other relevant documents. The activities of the project have the potential long-term benefit to contribute to limiting CO₂ emissions by facilitating easier access to improved healthcare, resulting in for example reduced number of hospital visits and shorter hospital stays.

Other Environmental and Social Aspects

If successful, the project will contribute to the creation and deployment of advances in the field of Digital Health, for example by improving access, analysis, and knowledge valorisation of data available in electronic health records.

Through the R&D activities and investments, the Promoter is also expected to sustain its current level of highly skilled personnel, while contributing to European scientific innovation, hence fostering and nurturing the vital research community.

Conclusions and Recommendations

Considering the above, the project is deemed acceptable for the Bank's financing under environmental and social terms.
