Environmental and Social Completion Sheet (ESCS)

Overview

Project Name:	WORLDSENSING (EGFF)
Project Number:	2019-0397
Country:	Spain
Project Description:	Worldsensing's main product is an IIoT (industrial internet of things) solution for online wireless data transmission from geotechnical monitoring sensors. The promoter's solution enables an efficient online and "real-time" monitoring of some critical geotechnical parameters on construction sites, infrastructure or tailing dams and ultimately leads to efficiency gains and increased safety.

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

The Project have been successfully implemented. No significant environmental and social issues have been identified in relation to the current project.

It can be highlighted that some results of the project's R&D activities are associated with environmental and social benefits. For example, the promoter's IIoT products can lead to an increased the safety through improved monitoring quality of geotechnical parameters on construction sites, infrastructure or tailing dams. This improved can for example lead increased safety conditions for workers on construction sites or in the best case avoid environmental impacts through tailing dam failures.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter during implementation and at completion that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
