Environmental and Social Completion Sheet (ESCS)

Overview

Project Name: *SOUTH-MORAVIA REGIONAL ROLLING STOCK*
Project Number: *2018-0572*
Country: *Czech Republic*
Project Description: acquisition of 37 electric multiple units for suburban and regional passenger services in the South Moravia Region.

Summary of Environmental and Social Assessment at Completion

EIB notes the following Environmental and Social performance and key outcomes at Project Completion.

The project fell neither under Annex I nor Annex II of the Environmental Impact Assessment Directive 2011/92/EU, as it is not applicable to the manufacturing and use of rail rolling stock. The rolling stock purchased within this project complies with the applicable Technical Specifications for Interoperability (TSI) which were required at admission of rolling stock into exploitation.

The maintenance of the new rolling stock takes place in the existing depot Brno-Maloměřice. No new construction or modification of existing depots was necessary for the project.

The project has brought some environmental benefits in terms of reduction of pollutant emissions and noise. The project is also in line with the Bank's lending policy to promote environmental protection by supporting the railways to maintain modal share in the markets that are most appropriately served by rail.

No significant environment or social issues were noted.

Summary opinion of Environmental and Social aspects at completion:

EIB is of the opinion based on reports from the promoter that the Project has been implemented in line with EIB Environmental and Social Standards, applicable at the time of appraisal.
